Introduction and Value to Client

Over the last 13 years the Alpha Terra Science Safety Division has continued to build on an extensive base of public sector relationships. Our efforts are recognized by the value we provide to our existing public sector client base. Successful safety program development and implementation based on extensive professional management skills has been recognized by public sector officials as a necessity not only to be in compliance, but to provide a commitment to their employees. Often times they have learned of this approach through referrals by neighboring communities or public sector entities.

Synopsis

The Alpha Terra Science Safety Division staff works throughout Wisconsin and surrounding states. Our regional emphasis has generated over 300 projects with public sector entities during the last 13 years. Many of these relationships continue to retain our services on an ongoing basis.

The majority of safety services that we provide are customized and site-specific in nature. Regulations require that written programs and on-site training be addressed in this manner.

We offer a complete turnkey approach in helping our business partners meet regulatory requirements. We will do as much of the legwork as possible so that our clients can remain productive with other job responsibilities. Written programs will consist of all of the elements required by the Standards. However, partnering in doing certain program development tasks is not discouraged and will be proposed accordingly.

Our knowledge of the regulations within the regulatory compliance segments serviced is second to none. We utilize a number of resources to keep current with the regulations while communicating with our clients of upcoming regulatory changes through the use of compliance updates.

Alpha Terra uses today's technology in development and implementation of Electronic Safety Management Systems currently in place with over 30 of our ongoing relationships and growing rapidly as new clients are attained.

**Alpha Terra Science
Safety Division**

BobCooke@alphaterra.net
GordyKoch@alphaterra.net
SteveAdamavich@alphaterra.net

Introduction and Value to Client

Over the last 15 years the Alpha Terra Science Safety Division has focused much attention in developing countywide relationships. These relationships have been established as a result of our regulatory compliance efforts with a significant amount of Wisconsin County Highway Departments. Successful safety program development and implementation based on extensive professional management skills has been recognized by county officials as a necessity not only to be in compliance, but to provide a commitment to their employees. Comprehensive safety program development and implementation of county highway department safety support often leads to countywide efforts.

Synopsis

In recent years more and more county entities have retained Alpha Terra Science as their contracted resource to develop, implement, and maintain their safety programs. Most often, growth in providing regulatory compliance services to counties is initiated as a result of a working relationship with county highway departments. In the last nine months alone, services have been provided to 4 new highway department clients.

Many Wisconsin counties retain insurance providers who offer loss control services and yet Alpha Terra is retained by these counties or county entities to meet their regulatory requirements.

To date, we provide regulatory compliance support to 6 entire counties and over 20 Wisconsin County Highway Departments on an ongoing basis and we continue to grow in this market due to an experienced project management staff who pride themselves in providing a professional approach and practical solutions.

It's our goal to provide counties with a comprehensive and uniform approach to regulatory compliance. By doing so, we eliminate the fragmented approach of having each county entity develop their own safety program. Program management by a professional resource ensures organization and continuity to the county providing a seamless approach to compliance.

With the introduction of our **Electronic Safety Management System** we are able to provide our clients with a tool to successfully manage their safety program while utilizing today's technology to increase efficiency.

An **Electronic Safety Management System** is customized to your location and contains information that is specific to your operations.
