Introduction and Value to Client

This concept was initiated only a short time ago and mirrors our **Electronic** "Environmental Management System" by setting up a safety management and recordkeeping system within a philosophy that promotes a teaming relationship. This makes the various professionals within Alpha Terra available, only as required, to the clients we serve. The effect of our systems approach and our philosophy assures that highly qualified people provide the needed services and costs are minimized by providing only the services needed and delivering them efficiently.

Synopsis

In a very short time span, Alpha Terra's Safety & Health Division professional's have developed an **Electronic** "Safety Management System" for a diverse group of clients. Towns, villages, cities, and counties have signed up for this management approach of their safety program while facilities representing foam manufacturing and equipment sales and repair are a few examples in private industry.

In some cases, a written safety program is already in place while other's are in the development stage. The **electronic** SMS can be initiated at any point during your safety program development phase.

The benefit of implementing an **electronic** SMS is that it eliminates the accumulation of written documentation stored in file drawers and binders. Retrieving records is greatly simplified, increasing the efficiency of your management staff.

Our staff will make revisions to the electronic SMS as they occur and by reviewing and updating the SMS on a regular basis.

All SMS's are tailored and customized to your location, just like we do when preparing your written safety program. You will be able to view any of your safety documents through password protected access and enter updates accordingly.

The SMS builds on what you are doing well now, and provides a structured approach to improve efficiency and effectiveness.
